PROFILE

Hi, I am Hasnain Haider, a mobile app developer with 2+ years of experience specializing in building beautiful, intuitive, and functional apps using Flutter and Flutter Flow. I'm passionate about creating user-centric experiences and possess strong skills in UI/UX design, API integration, and performance optimization. I have experience working on various mobile app projects, including Orbilon Technologies Pvt Ltd. I'm always looking for ways to improve my skills and stay up-to-date with the latest trends in mobile development. I'm dedicated to delivering exceptional results and would be happy to discuss your project and how I can help bring it to life.

WORK EXPERIENCE

ORBILON TECHNOLOGES

2023 - PRESENT

PROJECTS

Artflow: Android/iOS

Company

- I have used ASP.Net API Integration to enhance app functionality. AI Integration this project utilizes AI for advanced features and interactions like, marketing description, social media desc generates. Supports in-app purchases, allowing users to upgrade from free to pro accounts. Two user roles are supported Artist and Gallery. Free and Pro Accounts Offers different account tiers with varying features and capabilities. Include real time chats using SignalR integrate. Image Upload Allows users to upload single or multiple images using Cloudinary.I also use Secure Storage package environment variables managed through secure storage to protect sensitive data.

Sphere: Android/iOS

Company

- The Sphere app is an AI-based chatbot platform using Firebase for database management and notification scheduling. It offers features like tasks, notes, reminders, and meeting management, similar to ChatGPT but with controlled prompts. Sphere enhances productivity by integrating AI with organized scheduling and task management capabilities. Other integrate Map, Calender and Third party API etc.

Webnition: Android/iOS

Company

- Webnition is a complex app that integrates with an ASP.NET API to display data using interactive pie charts and graphs for various time frames (e.g. weekly, monthly, up to yearly). It handles large data sets with features like shimmer effects and infinite scrolling, similar to YouTube. Based in America, the app also offers live location tracking and displays detailed information about individuals and companies, including office locations, history, and ratings.

● **Seabee Study:** Android/iOS

Company

- The Seabee Study app is a real-time MCQ-based study tool that uses Firebase for its database. It targets university students by providing a collection of university-related multiple-choice questions (MCQs). Users can attempt MCQs, view live scores, and track their progress in real time. The app is divided into two phases, basic and advanced, and offers both free and pro account options for different levels of access and features.

● **BRAKE:** Android/iOS

Company

- Built a real-time slide sync app using Flutter for Android/iOS and web. Integrated Firebase for live updates and ASP.Net APIs for backend. Slide changes reflect instantly across devices. Enabled multidevice login with two-way sync between web and mobile, ensuring seamless control and presentation viewing across all platforms.

● **CareHub:** Android/iOS

Company

- Developed a cross-platform mobile healthcare app in Flutter with Firebase backend and Riverpod for state management. The app supports role-based access for caregivers, patients, and family members. Integrated phone number authentication, real-time chat, and Firebase Cloud Messaging for notifications. Implemented multilingual support using Flutter's localization and internationalization features. Designed for scalability and responsiveness across both Android and iOS platforms.

● **BuySpy:** Android/iOS

Company

- Developed Buyspy, an eBay-style Flutter app for Android and iOS. Integrated eBay APIs to fetch and display live product listings. Used Firebase for real-time notifications and ASP.Net for backend services. Implemented configurable notification intervals (1, 5, 15, 30 minutes, and 1 hour) to alert users on active eBay sales.

● **Carbid:** Only Android

Company

- The Carbid app is an internationalization and localization-based application designed for real-time product sales. It integrates with an ASP.NET API and supports live bidding and real-time chat features. The app utilizes SignalR in Flutter to enable seamless live communication and interaction, enhancing the buying and selling experience for users country.

● **EShop:** Only Android

Personal

- The EShop App is a real-time e-commerce platform that uses Firebase for its database. Users can browse products, view items based on category, add to cart, place orders, track order status, create accounts, manage profiles, and maintain their order history in real time.

● **Al Wassal Laundry** Only Android

Personal

- Developed a customer-facing mobile application using Flutter for seamless UI/UX, enabling users to browse laundry services, place orders with Stripe payment integration, and log in securely via Google Sign-In. Built an ASP.NET Core backend with MySQL database to manage orders, user authentication, and service catalogs.

● **I have many projects worked but show minimum 10**
