Orbilon Technologies Lahore.

- Flutter Android & IOS Developer.

University of Central Punjab, Lahore

- Bachelor of Software Engineering

Punjab Group of colleges

- Intermediate in Sciences

PROJECTS

ArtFlowPro (Artist & Gallery)

- I have used ASP.Net API Integration to enhance app functionality. AI Integration this project utilizes AI for advanced features and interactions like, marketing description, social media desc generates. Supports in-app purchases, allowing users to upgrade from free to pro accounts. Two user roles are supported Artist and Gallery. Free and Pro Accounts Offers different account tiers with varying features and capabilities.Include real time chats using SignalR integrate. Image Upload Allows users to upload single or multiple images using Cloudinary.I also use Secure Storage package environment variables managed through secure storage to protect sensitive data.

Spheres (AI Assistant App)

- The Sphere app is an AI-based chatbot platform using Firebase for database management and notification scheduling. It offers features like tasks, notes, reminders, and meeting management, similar to ChatGPT but with controlled prompts. Sphere enhances productivity by integrating AI with organized scheduling and task management capabilities. Other integrate Map, Calender and Third party API etc..

Al-Wassal-Laundry

- Developed a customer-facing mobile application using Flutter for seamless UI/UX, enabling users to browse laundry services, place orders with Stripe payment integration, and log in securely via Google Sign-In. Built an ASP.NET Core backend with MySQL database to manage orders, user authentication, and service catalogs.

Webnition

- Webnition is a complex app that integrates with an ASP.NET API to display data using interactive pie charts and graphs for various time frames (e.g. weekly, monthly, up to yearly). It handles large data sets with features like shimmer effects and infinite scrolling, similar to YouTube. Based in America, the app also offers live location tracking and displays detailed information about individuals and companies, including office locations, history, and ratings.

Seabee Study

- The Seabee Study app is a real-time MCQ-based study tool that uses Firebase for its database. It targets university students by providing a collection of university-related multiple-choice questions (MCQs). Users can attempt MCQs, view live scores, and track their progress in real time. The app is divided into two phases, basic and advanced, and offers both free and pro account options for different levels of access and features.

Brake

- Built a real-time slide sync app using Flutter for Android/iOS and web. Integrated Firebase for live updates and ASP.Net APIs for backend. Slide changes reflect instantly across devices. Enabled multidevice login with two-way sync between web and mobile, ensuring seamless control and presentation viewing across all platforms

CareHub

- Developed a cross-platform mobile healthcare app in Flutter with Firebase backend and Riverpod for state management. The app supports role-based access for caregivers, patients, and family members. Integrated phone number authentication, real-time chat, and Firebase Cloud Messaging for notifications. Implemented multilingual support using Flutter's localization and internationalization features. Designed for scalability and responsiveness across both Android and iOS platforms.

BuySpy

- Developed Buyspy, an eBay-style Flutter app for Android and iOS. Integrated eBay APIs to fetch and display live product listings. Used Firebase for real-time notifications and ASP.Net for backend services. Implemented configurable notification intervals (1, 5, 15, 30 minutes, and 1 hour) to alert users on active eBay sales.

LEADERSHIP, ACTIVITIES

Member, IEEE Society, University of Central Punjab

- Volunteered in several campaigns and raised a creditable amount for charity.
